## \*\*\*\*\* Introduction to FEA and Ansys\*\*\*\*\*

- ❖ Introduction to FEA
- ❖ General Working of FEA
- ❖ Nodes, Elements, and Element Shapes
- ❖ General Procedure of Conducting Finite Element Analysis
- ❖ FEA through ANSYS
- ❖ Effective Utilization of FEA
- ❖ FEA Software
- ❖ Advantages and Limitations of FEA Software
- ❖ Key Assumptions in FEA
- ❖ Assumptions Related to Geometry
- ❖ Assumptions Related to Material Properties
- ❖ Assumptions Related to Boundary Conditions
- ❖ Assumptions Related to Fasteners
- ❖ Types of Analysis
- ❖ Structural Analysis
- ❖ Thermal Analysis
- ❖ Fluid Flow Analysis
- ❖ Electromagnetic Field Analysis
- ❖ Coupled Field Analysis
- ❖ Important Terms and Definitions
- ❖ Strength (Resistance to Deformation)
- ❖ Load
- ❖ Stress
- ❖ Strain
- ❖ Elastic Limit
- ❖ Ultimate Strength
- ❖ Factor of Safety
- ❖ Lateral Strain and Poisson's Ratio
- ❖ Bulk Modulus
- ❖ Creep
- ❖ Engineering Materials
- ❖ Introduction to ANSYS
- ❖ System Requirements
- ❖ Getting Started with ANSYS
- ❖ Interactive Mode
- ❖ Batch Mode
- ❖ Starting a New File Using the ANSYS Product Launcher window
- ❖ ANSYS Output Window
- ❖ ANSYS Metaphysics Utility Menu Window (ANSYS Session)
- ❖ Utility Menu
- ❖ Main Menu
- ❖ Graphics Area
- ❖ Standard Toolbar

- ❖ ANSYS Command Prompt
- ❖ Command Window Icon
- ❖ Raise Hidden Icon
- ❖ Reset Picking
- ❖ Contact Manager
- ❖ ANSYS Toolbar
- ❖ Model Control Toolbar
- ❖ User Prompt Information
- ❖ Current Settings
- ❖ Setting the Analysis Preferences
- ❖ Units in ANSYS
- ❖ Other Important Terms Related to ANSYS
- ❖ Dialog Boxes
- ❖ Graphics Display
- ❖ Panning, Zooming, and Rotating the Model
- ❖ Dividing the Graphics Area
- ❖ The Pan-Zoom-Rotate Dialog Box
- ❖ Graphics Picking
- ❖ Using Mouse Buttons for Picking
- ❖ ANSYS Database and Files
- ❖ Saving the File
- ❖ Resuming the File
- ❖ Clearing the Database
- ❖ Some Basic Steps in General Analysis Procedure
- ❖ Points to Remember while Performing an Analysis
- ❖ Exiting ANSYS
- ❖ Self-Evaluation Test

### ➤ **Basic Solid Modeling**

- ❖ Solid Modeling in ANSYS
- ❖ Solid Modeling and Direct Generation
- ❖ Solid Modeling Methods
- ❖ Bottom-up Construction
- ❖ Top-down Construction
- ❖ Considerations before Creating a Model for Analysis
- ❖ Details Required
- ❖ Symmetry
- ❖ Creating Geometric Entities
- ❖ Creating Lines
- ❖ Creating Arcs
- ❖ Creating B-Spines
- ❖ Creating Fillets between Intersecting Lines
- ❖ Creating Areas
- ❖ Creating and Modifying Work planes
- ❖ Display Working Plane
- ❖ Show WP Status
- ❖ WP Settings

- ❖ Offset WP by Increments
- ❖ Offset WP to
- ❖ Align WP with
- ❖ Coordinate Systems in ANSYS
- ❖ Global Coordinate System
- ❖ Local Coordinate System
- ❖ Active Coordinate System
- ❖ Display Coordinate System
- ❖ Nodal Coordinate System
- ❖ Element Coordinate System
- ❖ Results Coordinate System
- ❖ Creating New Coordinate Systems
- ❖ Deleting Existing Coordinate

### ➤ **Advanced Solid Modeling**

- ❖ Advanced Solid Modeling
- ❖ Creating Volumes
- ❖ Extruding Entities
- ❖ Extending the Line
- ❖ Creating Complex Solid Models by Performing Boolean Operations
- ❖ Modifying the Solid Model
- ❖ Scale
- ❖ Move
- ❖ Copy
- ❖ Reflect
- ❖ Deleting Solid Model Entities
- ❖ Importing Solid Models
- ❖ Importing the IGES File
- ❖ Importing Models from Pro/ENGINEER
- ❖ Importing the Model from Unigraphics

### ➤ **Finite Element Modeling (FEM) – I**

- ❖ An Overview of the Finite Element Modeling
- ❖ Element Attributes
- ❖ Element Types
- ❖ Reasons Why ANSYS has a Large Element Library
- ❖ Real Constants
- ❖ Material Properties
- ❖ Multiple Attributes
- ❖ Assigning Multiple Attributes before Meshing
- ❖ Assigning Default Attributes before Meshing
- ❖ Modifying Attributes after Meshing
- ❖ Verifying Assigned Attributes
- ❖ Element Attributes Table

### ➤ **Finite Element Modeling (FEM) – II**

- ❖ Finite Element Modeling (FEM) - II
- ❖ Mesh Generation
- ❖ Mesh Density
- ❖ Meshing the Solid Model
- ❖ Setting Element Attributes
- ❖ Defining the Mesh
- ❖ Defining the Entity to be Meshed
- ❖ Defining the Meshing Type
- ❖ Meshing the Model
- ❖ Refining the Mesh Locally
- ❖ Extruding the Mesh
- ❖ Transitional Pyramid Elements
- ❖ Requirements for Creating Pyramid Elements
- ❖ Creating Transitional Pyramid Elements (Hex-to-Tet Meshing)
- ❖ Converting Degenerate Tetrahedral (20 nodes) Elements into
- ❖ Non-degenerate (10 nodes) Tetrahedral Elements
- ❖ Plotting Pyramid Elements
- ❖ Meshing the Beam with Orientation Nodes
- ❖ Creating the Beam Mesh with Orientation Nodes
- ❖ Creating the Beam Mesh with Two Orientation Nodes
- ❖ Improving the Tetrahedral Element Meshes
- ❖ Improving Tetrahedral Meshed Volumes by Using Volumes
- ❖ Improving Tetrahedral Meshed Volumes by Using Detached Elements
- ❖ Some Additional Tips while Meshing the Model
- ❖ Applying Loads
- ❖ The Nodal Coordinate System
- ❖ Loads in Different Disciplines
- ❖ Types of Loads in ANSYS
- ❖ Load Steps, Sub steps, and Time
- ❖ Applying Loads
- ❖ Deleting Loads
- ❖ Deleting DOF Constraints
- ❖ Deleting all Loads and Load Step Options
- ❖ Deleting all Loads Applied on Solid Model
- ❖ Deleting all Loads Applied on Finite Element Model

### ➤ **Solution And Postprocessor**

- ❖ Solution
- ❖ Defining the New Analysis Type
- ❖ Restarting the Analysis
- ❖ Setting Solution Controls
- ❖ Setting Analysis Options
- ❖ Solving the Analysis Problem
- ❖ Post processing the Result
- ❖ POST1 (General Postprocessor)
- ❖ POST26 (Time-history Postprocessor)
- ❖ Result Coordinate System (RSYS)

- ❖ Displaying the Deformed Shape of the Model
- ❖ Displaying the Minimum and Maximum Stresses
- ❖ Listing Reaction Forces
- ❖ Listing Stress Values at each Node
- ❖ Query Picking
- ❖ Path Operations
- ❖ Load Case Combinations

### ➤ **Static Structural Analysis**

- ❖ Effect of self-weight on a cantilever beam
- ❖ Analysis of a bicycle handle
- ❖ Analysis of a stud (pin)
- ❖ Analysis of a master

### ➤ **Advanced Structural Analysis (Dynamic And Nonlinear)**

- ❖ Advanced Structural Analysis
- ❖ Dynamic Analysis
- ❖ Performing the Modal Analysis
- ❖ Specifying the Analysis Type, Analysis Options, and Applying Loads
- ❖ Obtaining the Solution
- ❖ Reviewing Results
- ❖ Performing the Harmonic Analysis
- ❖ Specifying the Analysis Type, Analysis Options, and Applying Loads
- ❖ Obtaining the Solution
- ❖ Reviewing Results
- ❖ Performing the Transient Analysis
- ❖ Specifying the Analysis Type, Analysis Options, and Applying Loads
- ❖ Obtaining the Solution
- ❖ Reviewing Results
- ❖ Nonlinear Analysis
- ❖ Geometric Nonlinearity
- ❖ Material Nonlinearity
- ❖ Boundary Nonlinearity (Changing Status)
- ❖ Performing the Nonlinear Analysis
- ❖ Specifying the Analysis Type, Setting Solution Controls, and Applying Loads
- ❖ Obtaining the Solution

### ➤ **Advanced Structural Analysis**

- ❖ Steel tubes and springs structure
- ❖ Modal analysis of an airplane wing
- ❖ Nonlinear analysis (material nonlinearity)

### ➤ **Thermal Analysis**

- ❖ Thermal Analysis
- ❖ Important Terms Used in Thermal Analysis

- ❖ Heat Transfer Modes
- ❖ Thermal Gradient
- ❖ Thermal Flux
- ❖ Bulk Temperature
- ❖ Film Coefficient
- ❖ Emissivity
- ❖ Stefan–Boltzmann Constant
- ❖ Thermal Conductivity
- ❖ Specific Heat
- ❖ Types of Thermal Analysis
- ❖ Steady-State Thermal Analysis
- ❖ Transient Thermal Analysis
- ❖ Performing Steady-State Thermal Analysis
- ❖ Setting the Analysis Preference
- ❖ Creating or Importing a Solid Model
- ❖ Defining Element Attributes
- ❖ Meshing the Solid Model
- ❖ Specifying the Analysis Type, Analysis Options, and Applying Loads
- ❖ Solving the Analysis Problem
- ❖ Post processing Results
- ❖ Performing Transient Thermal Analysis
- ❖ Specifying the Analysis Type and Setting Solution Controls

### ➤ **Generating The Report Of Analysis**

- ❖ Starting the ANSYS Report Generator
- ❖ Capturing Images for the Report
- ❖ Capturing Animations for the Report
- ❖ Capturing Data Tables for the Report
- ❖ Capturing Lists for the Report
- ❖ Compiling the Report
- ❖ Changing the Default Settings of the ANSYS Report Generator
- ❖ Error Estimation in Solution
- ❖ Percentage Error in Energy Norm (SEPC)
- ❖ Element Energy Error (SERR)
- ❖ Element Stress Deviations (SDSG)
- ❖ Maximum and Minimum Stress Bounds (SMXB and SMNB)
